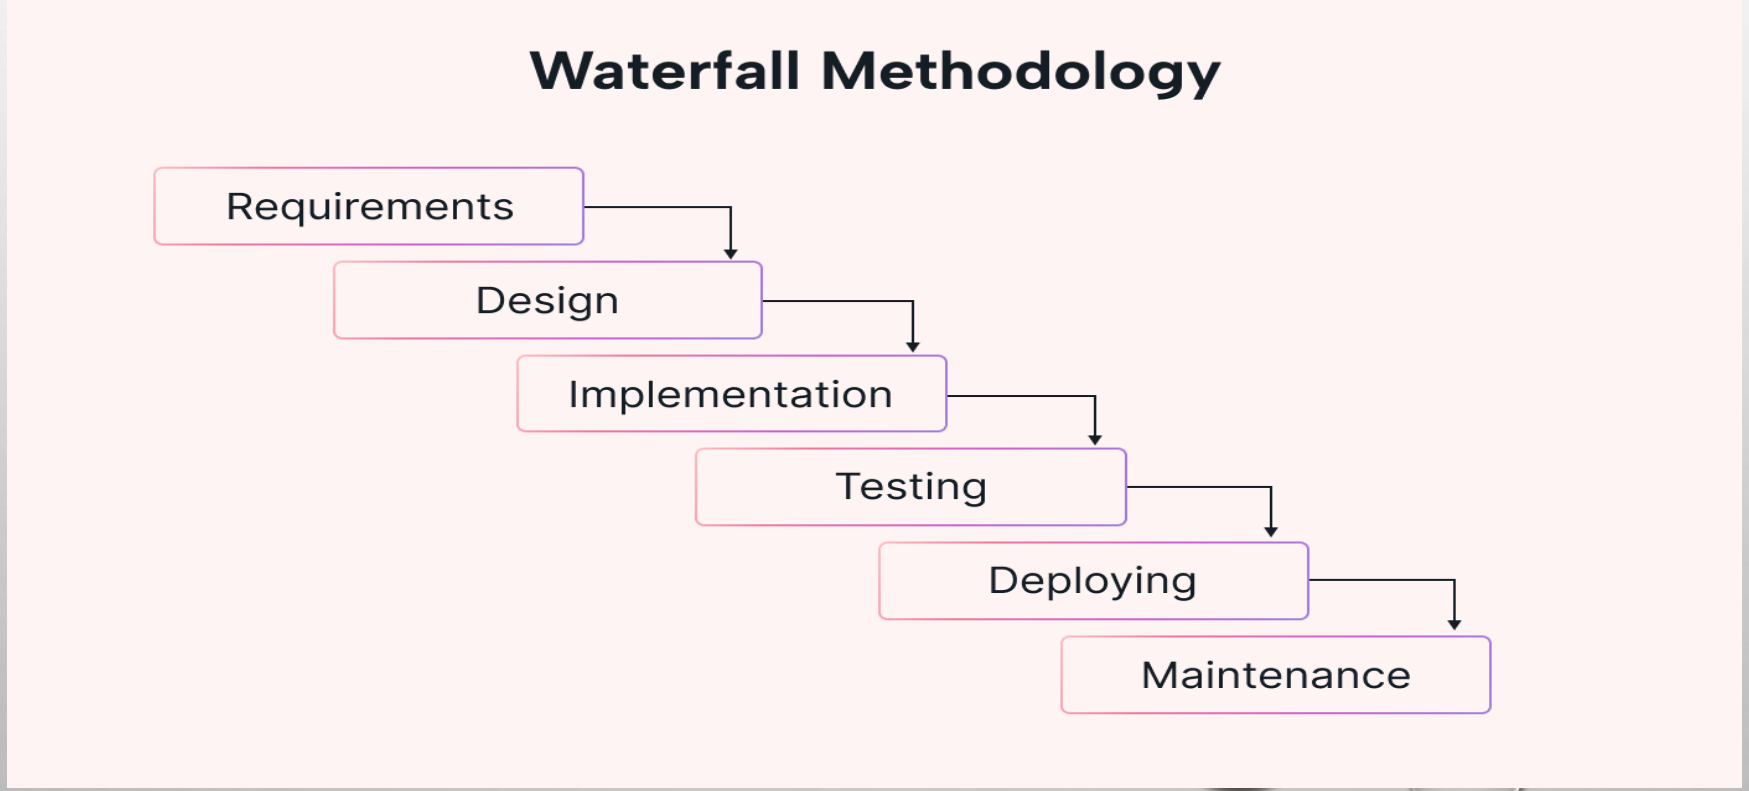
WATERFALL, AGILE, AND SCRUM METHODOLOGIES

WATERFALL METHOD

The **Waterfall Methodology** is a traditional and linear approach to software development where each phase must be completed fully before the next phase begins.



Pro's :

- Easy to understand and use
- Well-documented process
- Simple to manage with clear stages
- Best for small projects with fixed requirements

Con's :

- Difficult to make changes once a phase is completed
- Not suitable for large or complex projects
- No working product until the final stage

AGILE METHOD

Agile is a software development approach that focuses on delivering work in small, continuous cycles with regular feedback.

Pro's :

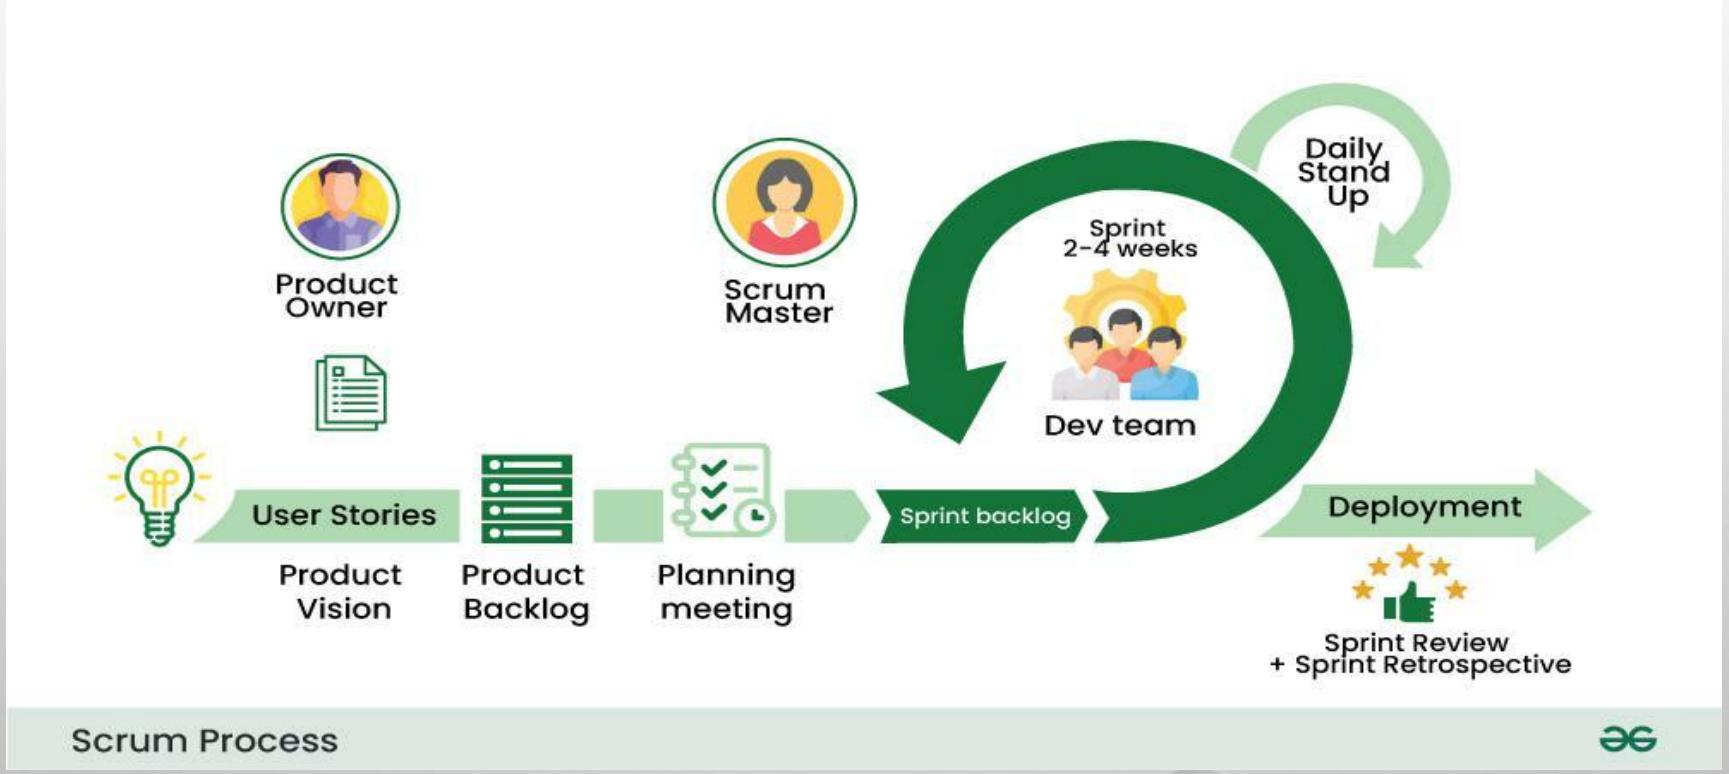
- Fast delivery
- Easy to handle changes
- Better quality
- Strong collaboration

Con's :

- Hard to estimate cost & time
- Requires constant client involvement
- Less documentation

SCRUM METHOD

Scrum is an Agile framework used to develop projects in short cycles called **Sprints** (1–4 weeks).



Pro's :

- Fast delivery
- Flexible to changes
- Strong teamwork
- Better quality

Con's :

- Needs experienced team
- Too many meetings
- Not good for fixed-scope projects

THANK YOU
